PROFESSIONAL SUMMARY

.NET and C# Backend Developer with hands-on professional experience migrating a legacy corporate platform to microservices using ASP.NET Core, CQRS, and Dapper at EPAM Neoris. Profile complemented by personal projects published on GitHub covering REST APIs, Minimal APIs, relational databases, Docker containers, and AI automation. Rigorous, autonomous, and equipped with strong analytical problem-solving skills.

WORK EXPERIENCE

.NET Backend Developer (Internship) — EPAM Neoris March 2026 - June 2026

Migration of a corporate legacy client-server platform (PowerBuilder) to C# / .NET microservices with ASP.NET Core under Vertical Slice Architecture.

- Migrated the legacy platform into decoupled microservices in C# with ASP.NET Core.
- Implemented CQRS handlers and vertical slices with per-service contracts and dependency injection.
- Optimized high-concurrency queries on IBM Informix, reducing timeouts from over 60s to under 10s.
- Wrote unit tests per slice, documented DTOs using Swagger / OpenAPI, and validated endpoints with Postman.
- Worked in Scrum following Git Flow, Pull Requests, and CI/CD pipelines in Azure DevOps, leveraging AI tools for test generation and debugging.

FEATURED .NET PROJECTS

CareerCopilot — AI-Powered Job Search Pipeline with Automated PDF Compilation github.com/idarkar3000/RadarChollos

Stack: C# · .NET 10 · Gemini REST API · Typst · PdfPig · SQLite · Telegram.Bot

- Built an end-to-end pipeline in C# / .NET 10 that scrapes job listings, deduplicates them in SQLite, and evaluates them via the Gemini REST API.
- Compiled tailored single-page A4 CVs into PDF format using Typst with automated content prioritization.
- Implemented an interactive Telegram bot with control commands and a local fallback mode to generate CVs without consuming AI quota.

RadarChollos — Real-Time Deal Monitoring Bot with Instant Alerts and Docker Deployment

Stack: C# · .NET 9 · EF Core · SQLite · Telegram.Bot · Minimal APIs · Docker · xUnit github.com/idarkar3000/CareerCopilot

- Designed a .NET 9 background service using BackgroundService for concurrent, automated deal scraping.
- Managed persistence using Entity Framework Core and SQLite, featuring anti-duplicate indices and an ID recycling algorithm.
- Implemented interactive Telegram commands (/add, /list, /delete) for runtime filter updates.

HomeHub — Full-Stack Home Management Application with Robust API and Modern SPA

Stack: C# · ASP.NET Core · Dapper · PostgreSQL · Angular 22 · FullCalendar github.com/idarkar3000/HomeHub

- Layered REST API in .NET (Minimal APIs) using Dapper and PostgreSQL, paired with an Angular 22 standalone SPA featuring signals, Angular Material, and a mobile-first native feel.
- Implemented an interactive calendar with Drag & Drop functionality and recurring tasks (daily/weekly/monthly).
- Developed reactive state modules for note taking and shopping list management.
- Built integration test suites for the API using xUnit and WebApplicationFactory with mock repositories.
- Documented endpoints and data contracts with Swagger / OpenAPI.

TECHNICAL SKILLS

Languages & Core: C#, .NET / .NET Core, ASP.NET Core (Minimal APIs, Web APIs), LINQ, Async/Await, Angular, WPF / XAML.
Architecture & Patterns: CQRS, Vertical Slice Architecture, Microservices, Dependency Injection.
Databases & ORMs: IBM Informix, SQLite, SQL Server, Entity Framework Core, Dapper, Index Optimization.
Methodologies & DevOps: Scrum, Agile Methodologies, Docker, Git, GitHub, Azure DevOps, Swagger / OpenAPI, Postman.

EDUCATION & LANGUAGES

Bachelor's Degree in Video Game Design and Development - Universidad Rey Juan Carlos (URJC) 2022 - 2026
Higher Technical Certificate in 3D Animation, Games and Interactive Environments (Academic Excellence) - IFP 2019 - 2021
Languages: Spanish (Native) | English (B2, TOEIC 805/990)
